

PROFESSIONAL SUMMARY

- Backend engineer with **4+ years** shipping product features and the platform infrastructure that powers them at scale. At BrowserStack, built enterprise-grade capabilities (**RBAC**, multi-language SDK support, geographic expansion) while driving **208×** performance gains and zero-downtime migrations on tables with **1B+ rows**. Hands-on with **Java/Spring Boot**, **Ruby on Rails**, **Go**, **SQL**, **ClickHouse**, **Kafka**, and **AWS** — with full ownership from design to production.

EXPERIENCE

- BrowserStack** Mumbai
Software Engineer Apr 2025 – Present
 - Product Features Shipped*
 - Shipped an enterprise-grade **RBAC access-control system** (roles, hierarchies, **14 check-points**), enabling org-scale permission management for enterprise customers.
 - Delivered **multi-language SDK support** across **100M+ API calls/month** via **client-aware routing**, expanding platform reach to non-English enterprise markets.
 - Consolidated **test runs and re-runs** into **accurate aggregate results** (status, duration), eliminating duplicate entries for teams running large suites.
 - Introduced a **CDC pipeline** from **MySQL to ClickHouse** for a **10TB** database, supporting **5B+ inserts/updates** for real-time analytics.
 - Launched BrowserStack's **Australia AWS region** to meet **data-residency requirements**, now handling **360K requests/hour** in production.
 - Built **IaC provisioning** for **35 Debezium CDC connectors** with auto-sync, eliminating manual config drift across 4 regions.
 - Halved per-session auth calls (**2 → 1**) for accessibility products via a lightweight config service, cutting **102K auth calls/day**.
 - Platform & Performance*
 - Drove **208×** **query speedup** (**9.6s → 46ms**) on a **524M-row analytics table** via zero-downtime schema migrations across 4 regions.
 - Cut dashboard load from **3–4 min → 3s** by **indexing high-cardinality queries**, directly unblocking a stalled enterprise deal.
 - Executed **zero-downtime PK migrations** on 3 tables of **1B+ rows** (~1 TB, **2.9M rows/day**) to prevent production outages.
 - Offloaded heavy aggregate queries from **MySQL to ClickHouse**, **stabilizing database CPU from 96%** and enabling future growth.
 - Remediated **SQL injection** across 50+ APIs and shipped **SAST-based CI scanning** covering **~98% of production traffic**.
 - Resolved **2 critical vulnerabilities** (RCE and SSRF bypass) and enabled **TLS for database connections** to harden production security.
- Zus (formerly Ochain)** Cupertino, CA (Remote)
Software Engineer - Blockchain Storage & Mobile Feb 2022 – Mar 2025
 - Shipped 2 production Android apps, **Bolt** and **Vult**, driving **20% adoption growth** and **\$2M+** in transactions.
 - Built a **UAT automation suite** for blockchain storage, cutting bugs by **90%** and release cycles from **2 weeks to 3 days**.
 - Optimized **S3-compatible storage** handling **500M+ files** and **40TB+** across **50+ nodes** at sub-100ms latency, **99.9% uptime**.
 - Automated dynamic **Sharder/Miner** management and view-change protocols, boosting developer productivity by **90%**.
 - Enhanced **multi-wallet concurrency** via unified **GoSDK**, supporting **10K+ concurrent** transactions and **300% load-test gains**.
- Oppia Foundation (GSoC)** Mountain View, CA (Remote)
OSS Contributor & GSoC Jun 2021 – Sep 2022
 - Contributed to **Gradle to Bazel** migration, achieving **10x improvement** in build speeds.
 - Built **CI/CD pipelines** (GSoC) automating build triggers and deployment to **Google Drive**, **GCP**, and **Play Store**.
 - Developed modular **MVVM/MVP** architectures with **tablet support** for multiple screen sizes.
 - Authored **70+ Unit Tests** and **20+ E2E tests** using Espresso, Robolectric, and UIAutomator.

ACHIEVEMENTS

- Selected for **Google Summer of Code 2022** (Oppia Foundation).
- Won **top prize** at the **CAMS Hackathon** for developing its Android app.
- Rated **Specialist** on Codeforces (max-rating **1509**) and **5-star** on CodeChef.
- Practised **700+ DSA problems** on Leetcode.

TECHNICAL SKILLS

Languages: Java, Go, Ruby, Kotlin, Python, SQL, C++, Bash
Frameworks: Spring Boot, Rails, Node.js, Gin, REST, GraphQL
DevOps & Tools: CI/CD, Prometheus, Grafana, Loki, SAST

Cloud & Infra: AWS, Docker, K8s, Kafka, Jenkins, Helm, CDC
Databases: ClickHouse, MySQL, PostgreSQL, Redis, MongoDB
Testing & Design: JUnit, Mockito, Espresso, System Design

EDUCATION

- Indian Institute of Information Technology, Lucknow** Lucknow
Bachelor of Information Technology; CGPA: 8.32 Apr 2020 – Apr 2024
