Yash Verma

Backend Software Engineer, 3+ years (Java, Go, Python, JavaScript, Ruby) | Immediately Available

yashverma10019.work@gmail.com | +91 8957557113 | linkedin.com/in/yash10019coder | github.com/yash10019coder

Professional Experience

BrowserStack *(cloud software-testing platform)* — Mumbai

Software Engineer - Backend, Platform Team — *Apr 2025 – Jul 2026*

Resigned for medical reasons; fully recovered and available immediately.

- Cut dashboard load for **OpenAI** from **4 min to 3s** by indexing high-cardinality queries, unblocking a stalled enterprise deal.
- Drove **208x query speedup** (9.6s to 46ms) on a 524M-row analytics table via zero-downtime schema migrations across 4 regions.
- Designed and shipped role-based access control (**RBAC**): roles, hierarchies, 14 check-points, enabling org-wide permissions for **50K+ customers**.
- Architected a real-time data-sync (**CDC**) pipeline (35 Debezium connectors) syncing **10TB** MySQL to **ClickHouse**, supporting **5B+ inserts/updates**.
- Provisioned the **Australia region** of **TestHub** (central data platform for 13 product teams) for data residency: EKS/FluxCD deploys, multi-AZ **MySQL RDS**, **Redis**, Amazon **MSK** (Kafka), Route 53/security groups, and region-local **Debezium-to-ClickHouse** pipelines, now serving **360K requests/hour**.
- Built a **Spring Boot** Central Auth service replacing inter-product service-to-service calls, halving per-session auth calls (2→1), saving **102K calls/day**.
- Fixed SQL injection in 200+ APIs and **2 critical vulnerabilities** (RCE, SSRF bypass); shipped SAST CI covering **98% of production traffic**.

Zus (formerly 0Chain) *(decentralized storage network)* — Remote

Software Engineer - Backend, Blockchain Storage — *Feb 2023 – Mar 2025*

- Architected and maintained core components of **0Chain's mainnet blockchain** (codebase, monitoring), sustaining **1.4 years** of uptime with zero major failures across **130M+ transactions**.
- Extended **blobber**, a distributed **Go** storage node, with concurrency primitives and **Merkle trees** for cryptographic proof-of-storage.
- Implemented features in **gosdk**, the client SDK (shipped as **WebAssembly** & mobile SDK) for object storage, including **erasure encoding** for fault tolerance and **10K+ concurrent** transactions; also worked on its **zboxcli**/**zwalletcli** CLI tooling.
- Redesigned the **Storage Smart Contract** (allocation lifecycle, challenge generation/expiry, provider kill/shutdown), fixing critical defects that had caused production instability.
- Built **0Box API** request flows, Kafka event replication & Stripe subscriptions for 5 web, 2 iOS, 2 Android, 1 macOS, 1 Windows apps.
- Automated dynamic **Sharder/Miner** (consensus-node) management and helped land a major consensus upgrade (**View Change**) enabling dynamic node rotation via **Magic Blocks**, boosting developer productivity by **90%**.

Open Source Contributions

Oppia Foundation (GSoC) [Merged PRs] — Mountain View, CA (Remote)

OSS Contributor & GSoC — *Jun 2021 – Jan 2022*

- Contributed to **Gradle to Bazel** migration, achieving **10x improvement** in build speeds; built **CI/CD pipelines** automating deployment to Google Drive, GCP, and Play Store for 4+ tracks.
- Mentored **3+** students and authored **70+ unit** and **20+ E2E tests** across a modular MVVM/MVP codebase.

Projects

JobBorg — Personal Project

Multi-User Job-Search Automation Platform *(Django, Celery, PostgreSQL, Redis, Docker)*

- Designed a modular Ingestion → Classification → Matching → Recommendation pipeline, each stage an independent **Celery** task on a Redis-backed queue with Celery Beat scheduling.
- Built idempotent hourly **Greenhouse ATS API** ingestion (source-ID keyed) and change-aware classification rerunning only on diffs.
- Shipped multi-container **Docker** stack (Postgres with pgvector, Redis, Prometheus, Loki, Grafana) for metrics, logs, dashboards.
- Built a **Playwright**-driven auto-apply engine that fills real Greenhouse forms, constraining LLM answers via a deterministic validation gate and failing closed on any unresolved field, covered by **290 automated tests**.

Achievements

- Selected for **Google Summer of Code 2021** (Oppia Foundation).
- Won **top prize** at the **CAMS Hackathon** for developing an Android app.
- Rated **Specialist** on Codeforces (max-rating **1509**) and **5-star** on CodeChef.

Technical Skills

- **Languages:** Java, Go (Golang), JavaScript, Ruby, SQL, Python, Kotlin, C, C++
- **Frameworks:** Spring Boot, Rails, Node.js, Django, REST APIs, gRPC, Microservices Architecture
- **Cloud & Infra:** AWS, Docker, Kubernetes, Kafka, GitHub Actions, Jenkins, Terraform (HCL), Helm, FluxCD, CDC, CI/CD
- **Databases:** MySQL, PostgreSQL, ClickHouse, Redis, MongoDB
- **Concepts:** System Design, Distributed Systems, Event-Driven Architecture, Concurrency
- **Tools:** Prometheus, Grafana, JUnit, SAST, Claude Code, Cursor, MCP

Education

Indian Institute of Information Technology, Lucknow — India

Bachelor of Information Technology; CGPA: 8.32/10 — *Apr 2020 – Apr 2024*
