EDUCATION

- **Indian Institute of Information Technology, Lucknow** Lucknow
Bachelor of Information Technology; CGPA: 8.32 Apr 2020 - Apr 2024
- **Relevant Courses:** Data Structures & Algorithms, Operating Systems, System Design, DBMS, Object-Oriented Programming, Distributed Systems.

PROFESSIONAL SUMMARY

- Backend engineer with **3+ years** building scalable distributed systems, microservices, and APIs in production.
- Delivered measurable reliability and performance improvements, including reducing dashboard latency from **3–4 minutes to 3 seconds** through query and data-path optimization.
- Hands-on with **Java/Spring Boot, Ruby on Rails, SQL, Redis, ClickHouse, AWS (RDS), Jenkins, and CI/CD**, with strong ownership of deployments and operational excellence.

EXPERIENCE

- **BrowserStack** Mumbai (Mallard West)
SDE - Backend - Ruby, Rails, Express, JavaScript, SpringBoot, Java Apr 2025 – Present
 - Implemented request-level user blocking in TestHub to isolate abusive traffic and prevent service impact for other users.
 - Delivered project name sanitization across TestHub, Dashboard, and SDK validations, enabling consistent multilingual support and reducing cross-product mismatches.
 - Expanded GRR compatibility for **Australia**, unblocking region-specific onboarding and execution workflows.
 - Shipped Central Auth Phase 2 for A11y/AppA11y, reducing dependency from **2 Rails calls to 1 call** via SDK -i Config Server -i Ingester orchestration.
 - Led source-list optimization, cutting dashboard latency from **3–4 minutes to 3 seconds** by replacing full table scans with index-driven queries and improving database efficiency.
 - Built ClickHouse sync tables and RDS migration/backfill pipelines, unblocking **3+ teams** and moving analytical workloads off primary databases for better scalability.
 - Implemented Connectors-as-Code using versioned YAML definitions for native Debezium connectors, synced through automated jobs for consistent provisioning.
 - Added a Jenkins pre-deploy validation job to verify multi-region RDS migrations before release, reducing deployment risk and improving release reliability.
- **Zus (formerly Ochain)** Cupertino, CA (Remote)
Senior Software Engineer - Blockchain Storage & Mobile - Golang, Kotlin, GitHub Actions, Gin, Grafana Feb 2022 – Mar 2025
 - Architected and deployed two production Android apps: **Bolt** (crypto wallet) and **Vult** (decentralized storage), driving **20%** increase in platform adoption and processing **\$2M+** in transactions.
 - Spearheaded comprehensive **UAT automation suite** for enterprise blockchain storage, reducing critical production bugs by **90%** and cutting release cycles from **2 weeks to 3 days**.
 - Optimized **S3-compatible distributed storage** infrastructure handling **500M+ files** and **40TB+** data across **50+ nodes**, achieving consistent sub-**100ms** latency with **99.9%** uptime.
 - Built **real-time monitoring** dashboards using **Grafana/Prometheus**, tracking **blockchain consensus**, storage allocation, and network performance across distributed infrastructure.
 - Developed **automated DevOps workflows** for dynamic **Sharder/Miner** management and view-change protocols, boosting developer productivity by **90%** and reducing manual intervention.
 - Enhanced **multi-wallet concurrency** handling with unified **GoSDK**, supporting **10K+ concurrent** transactions and improving load test performance by **300%**.
 - Implemented **Erasure Coding (EC)** optimization for video streaming workloads, reducing storage overhead by **40%** while maintaining data integrity across parity nodes.
- **Google Summer of Code Oppia Foundation** Remote
GSOC - Kotlin, GitHub Actions, JUnit, UIAutomator, Gradle, Bazel, AndroidSDK Jun 2021 – Sept 2022
 - Designed robust **CI/CD infrastructure** with automated build triggers for alpha, beta, and test releases.
 - Implemented automated deployment to **Google Drive, GCP Bucket**, and **Google Play Store** tracks.
 - Authored custom **Kotlin scripts** and **GitHub Actions** to optimize CD pipelines for scheduled releases.
- **Oppia Foundation Github Link [Link to Merged PRs]** Mountain View, CA (Remote)
Open Source Contributor Android June 2021 – April 2022
 - Contributed to **Gradle to Bazel** migration, achieving **10x** improvement in build speeds.
 - Developed modular **MVVM/MVP** architectures with **tablet support** for multiple screen sizes.
 - Authored **70+ Unit Tests** and **20+ E2E tests** using Espresso, Robolectric, and UIAutomator.
- **Gnome Foundation** Remote
Open Source Contributor - Tech Stack: C, XML, GTK+ Sept 2021 – Feb 2022
 - Enhanced **Nautilus file manager** with new path-bar features, improving user efficiency by **20%**.
 - Implemented **drag-and-drop support** and keyboard shortcuts for seamless file organization.

PROJECTS

- **Parking Lot Management System:** RESTful API using **Node.js, Express.js, MongoDB** with **Winston** logging and **Jest** testing.
- **Airline Ticketing System:** **Spring Boot** MVC architecture with booking, querying, and cancellation features, **Dockerized**.

- **Trip Feedback System:** Secure feedback system using **Spring Framework** with user authentication.
- **Festify:** Multi-module Android event management app with **Node.js** backend and **MongoDB**.

ACHIEVEMENTS

- Practised over **700+** DSA problems on Leetcode.
- Member of **Oppia Foundation** for **2 years**.
- Completed **Cloud Engineering tracks** 30 Days of Google Cloud Program.

TECHNICAL SKILLS

- **Programming & Scripting:** Java, Go, Kotlin, Python, JavaScript, SQL, Bash, C/C++
- **Backend Frameworks:** Spring Boot, Ruby on Rails, Gin, Express.js, REST APIs, GraphQL, Microservices
- **DevOps & Cloud:** AWS (RDS), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, GCP, Linux, Helm, Prometheus/Grafana/Loki
- **Databases & Testing:** MySQL, PostgreSQL, MongoDB, Redis, ClickHouse, Query Optimization, JUnit, Mockito, UIAutomator
- **Tools & Libraries:** Git, Debezium, YAML, Retrofit/OkHttp, Gradle, Bazel, Android SDK, System Design
