

Yash Verma

Backend Software Engineer (Java, Go, Python, JavaScript, Ruby) | Immediately Available
yashverma10019.work@gmail.com | +91 8957557113 | [linkedin.com/in/yash10019coder](https://www.linkedin.com/in/yash10019coder) | github.com/yash10019coder

PROFESSIONAL EXPERIENCE

- BrowserStack** Mumbai
 - Software Engineer - Backend, Platform Team* Apr 2025 – July 2026 (role eliminated)
 - Designed and shipped an **RBAC** system (roles, hierarchies, 14 check-points), enabling org-wide permissions for **50k+ customers**.
 - Built a Central Authentication service in **Spring Boot**, replacing individual S2S calls between products and halving per-session auth calls (2 to 1), cutting **102K auth calls/day**.
 - Architected a **CDC pipeline** (35 Debezium connectors) syncing **10TB MySQL** to **ClickHouse**, supporting **5B+ inserts/updates**.
 - Led the launch of BrowserStack's Australia AWS region for GDPR/data-residency, now handling **360K requests/hour** in production.
 - Drove **208x query speed up** (9.6s to 46ms) on a 524M-row analytics table via zero-downtime schema migrations across 4 regions.
 - Cut dashboard load for **OpenAI** from **4 min to 3s** by indexing high-cardinality queries, unblocking a stalled enterprise deal.
 - Remediated SQL injection across 200+ APIs, resolved **2 critical vulnerabilities** (RCE, SSRF bypass), and shipped SAST CI scanning covering **98% of production traffic**.
- Zus (formerly Ochain)** Remote
 - Software Engineer - Backend, Blockchain Storage (Full-time Remote Contract)* Feb 2022 – Mar 2025
 - Architected and maintained core components of **OChain's mainnet blockchain** (codebase, monitoring), sustaining **1.4 years** of uptime with zero major failures across **130M+ transactions**.
 - Extended **blobber**, a distributed object storage system in **Golang**, using concurrency primitives and **Merkle trees** for cryptographic proof-of-storage.
 - Implemented features in **gosdk**, the client SDK (shipped as **WebAssembly** & mobile SDK) for object storage, including **erasure encoding** for fault-tolerant, **10K+ concurrent** transactions; also worked on its **zboxcli/zwalletcli** CLI tooling.
 - Redesigned the **Storage Smart Contract** (allocation lifecycle, challenge generation/expiry, provider kill/shutdown), fixing critical defects that had caused production instability.
 - Developed features for the **OBox API** — request flows, Kafka event replication, Stripe subscriptions — powering 5 web, 2 iOS, 2 Android, 1 macOS, and 1 Windows apps.
 - Automated dynamic **Sharder/Miner** (consensus-node) management and helped land a major consensus upgrade (**View Change**) enabling dynamic node rotation via **Magic Blocks**, boosting developer productivity by **90%**.

OPEN SOURCE CONTRIBUTIONS

- Oppia Foundation (GSoC) [Merged PRs]** Mountain View, CA (Remote)
 - OSS Contributor & GSoC* Jun 2021 – Jan 2022
 - Contributed to **Gradle to Bazel** migration, achieving **10x improvement** in build speeds; built **CI/CD pipelines** automating deployment to Google Drive, GCP, and Play Store for 4+ tracks.
 - Mentored **3+** students and authored **70+ unit** and **20+ E2E tests** across a modular MVVM/MVP codebase.

PROJECTS

- JobBorg** Personal Project
 - Multi-User Job-Search Automation Platform — Django, Celery, PostgreSQL, Redis, Docker*
 - Designed a modular Ingestion → Classification → Matching → Recommendation pipeline, each stage an independent **Celery** task on a Redis-backed queue with Celery Beat scheduling.
 - Built idempotent hourly ingestion from the **Greenhouse ATS API** (keyed on source-ID pairs), with change-aware classification that only reruns on content diffs.
 - Shipped a multi-container **Docker** deployment (Postgres w/ pgvector, Redis, Prometheus, Loki, Grafana) for metrics, log aggregation, and dashboards.
 - Built a **Playwright**-driven auto-apply engine that fills real Greenhouse forms, constraining LLM answers via a deterministic validation gate and failing closed on any unresolved field — covered by **290 automated tests**.

ACHIEVEMENTS

- Selected for **Google Summer of Code 2021** (Oppia Foundation).
- Won **top prize** at the **CAMS Hackathon** for developing its Android app.
- Rated **Specialist** on Codeforces (max-rating **1509**) and **5-star** on CodeChef.

TECHNICAL SKILLS

- Languages:** Java, Go, JavaScript, Ruby, SQL, Python, Kotlin, C, C++
- Frameworks:** Spring Boot, Rails, Node.js, Django, REST APIs, gRPC, Microservices Architecture
- Cloud & Infra:** AWS, Docker, Kubernetes, Kafka, GitHub Actions, Jenkins, HCL, Helm, FluxCD, CDC, CI/CD
- Databases:** MySQL, PostgreSQL, ClickHouse, Redis, MongoDB
- Concepts:** System Design, Distributed Systems, Event-Driven Architecture, Concurrency
- Tools:** Prometheus, Grafana, JUnit, SAST, Claude Code, Cursor, MCP

EDUCATION

- Indian Institute of Information Technology, Lucknow** Lucknow
 - Bachelor of Information Technology; CGPA: 8.32* Apr 2020 – Apr 2024
