PROFESSIONAL SUMMARY

- Backend engineer with 4+ years shipping product features and the platform infrastructure that powers them at scale. Performance-obsessed and ownership-driven. At BrowserStack, built enterprise-grade capabilities (RBAC, multi-language SDK support, geographic expansion) while driving **208x** performance gains and zero-downtime migrations on tables with **1B+ rows**. Hands-on with **Java/Spring Boot, Ruby on Rails, Go, SQL, ClickHouse, Kafka, and AWS** — with full ownership from design to production.

EXPERIENCE

- BrowserStack** Mumbai
Software Engineer - Backend, Platform Team Apr 2025 – Present
Product Features Shipped
 - Built an **LLM-powered** pipeline (Claude) that auto-generates SDK framework support, cutting new-SDK delivery from **2 weeks** to **1 day** and shipping **5** to production.
 - Shipped an enterprise-grade RBAC access-control system (roles, hierarchies, 14 check-points), enabling organisation-wide permission management for **50k+ enterprise customers**.
 - Delivered multi-language SDK support across **5B+ API calls** via client-aware routing, expanding platform reach to non-English enterprise markets.
 - Architected CDC pipeline from MySQL to ClickHouse for a **10TB** database, supporting **5B+ inserts/updates** for real-time analytics. Along with IAC provisioning for 35 Debezium CDC connectors with auto-sync, eliminating manual config drift across 4 regions.
 - Launched BrowserStack's Australia AWS region to meet GRR/GDPR, now handling **360K requests/hour** in production.
 - Halved per-session auth calls (2 to 1) for accessibility products via a lightweight config service, cutting **102K auth calls/day**.*Platform & Performance*
 - Drove **208x query speed up** (9.6s to 46ms) on a 524M-row analytics table via zero-downtime schema migrations across 4 regions.
 - Cut dashboard load for **OpenAI** from **4 min to 3s** by indexing high-cardinality queries, directly unblocking a stalled enterprise deal.
 - Executed zero-downtime PK migrations on 3 tables of **1B+ rows** (~1 TB, 2.9M rows/day) to prevent production outages.
 - Offloaded heavy aggregate queries from MySQL to ClickHouse, stabilizing database CPU from **96%** and enabling future growth.
 - Remediated SQL injection across 200+ APIs and shipped Static CI security scanning covering **~98% of production traffic**.
 - Resolved **2 critical vulnerabilities** (RCE and SSRF bypass) and enabled TLS for database connections to harden production security.
- Zus (formerly Ochain)** Cupertino, CA (Remote)
Software Engineer - Backend, Blockchain Storage & Mobile Feb 2022 – Mar 2025
 - First adopter of **MCP** to integrate a file-server MCP which directly communicates with AI agents to **read/write** files on chain.
 - Shipped 2 production Android apps, Bolt and Vult, driving 20% adoption growth and **\$2M+** in blockchain transactions.
 - Built a UAT automation suite for blockchain storage, cutting bugs by **90%** and release cycles from 2 weeks to 3 days.
 - Optimized S3-compatible storage handling **500M+ files** and 40TB+ across 50+ nodes at sub-100ms latency, 99.9% uptime.
 - Automated dynamic Sharder/Miner management and view-change protocols, boosting developer productivity by **90%**.
 - Enhanced multi-wallet concurrency via unified Go SDK, supporting **10K+ concurrent** transactions and 300% load-test gains.
- Oppia Foundation (GSoC)** Mountain View, CA (Remote)
OSS Contributor & GSoC Jun 2021 – Jan 2022
 - Contributed to **Gradle to Bazel** migration, achieving **10x improvement** in build speeds.
 - Built **CI/CD pipelines** (GSoC) automating build triggers and deployment to **Google Drive, GCP, and Play Store** for 4+ tracks.
 - Mentored and onboarded **3+ students** in the Android repository, guiding them to become active collaborators.
 - Developed modular MVVM/MVP architectures with **tablet support** for **30+** screen sizes.
 - Authored **70+ Unit Tests** and **20+ E2E tests** using Espresso, Robolectric, and UIAutomator.
- Gnome** Remote
OSS Contributor Jan 2021 – May 2021
 - Contributed to the **GNOME Shell** desktop environment, improving user experience and stability.
 - Implemented a new feature for managing virtual desktops, allowing users to easily switch between workspaces.
 - Fixed several bugs related to window management and system performance, enhancing overall usability.

ACHIEVEMENTS

- Selected for **Google Summer of Code 2022** (Oppia Foundation).
- Won **top prize** at the **CAMS Hackathon** for developing its Android app.
- Rated **Specialist** on Codeforces (max-rating **1509**) and **5-star** on CodeChef.
- Practised **700+** DSA problems on Leetcode.

TECHNICAL SKILLS

Languages: Java, Go, Ruby, Kotlin, Python, SQL, C, C++, Bash
Frameworks: Spring Boot, Rails, Node.js, Gin, REST, GraphQL
DevOps & Tools: CI/CD, Prometheus, Grafana, Loki, SAST

Cloud & Infra: AWS, Docker, K8s, Kafka, Jenkins, Helm, CDC
Databases: ClickHouse, MySQL, PostgreSQL, Redis, MongoDB
Testing & Design: JUnit, Mockito, Espresso, System Architecture

EDUCATION

- Indian Institute of Information Technology, Lucknow**
Bachelor of Information Technology; CGPA: 8.32

Lucknow
