PROFESSIONAL SUMMARY

- Backend engineer with **4+ years** shipping product features and the platform infrastructure that powers them at scale. At BrowserStack, built enterprise-grade capabilities (**RBAC**, multi-language SDK support, geographic expansion) while driving **208x** performance gains and zero-downtime migrations on tables with **1B+ rows**. Hands-on with **Java/Spring Boot**, **Ruby on Rails**, **Go**, **SQL**, **ClickHouse**, **Kafka**, and **AWS** — with full ownership from design to production.

PROFESSIONAL EXPERIENCE

- BrowserStack** Mumbai
Software Engineer - Backend, Platform Team Apr 2025 – July 2026
Product Features Shipped
 - Built an **LLM-powered** (Claude) pipeline auto-generating SDK framework support, cutting new-SDK delivery **2 weeks to 1 day**.
 - Designed and shipped an **RBAC** system (roles, hierarchies, 14 check-points), enabling org-wide permissions for **50k+ customers**.
 - Delivered **multi-language SDK support** across **5B+ API calls** via client-aware routing to non-English enterprise markets.
 - Architected a **CDC pipeline** (35 Debezium connectors) syncing **10TB MySQL** to **ClickHouse**, supporting **5B+ inserts/updates**.
 - Led the launch of BrowserStack's Australia AWS region for GDPR/data-residency, now handling **360K requests/hour** in production.
 - Halved per-session auth calls (2 to 1) for accessibility products via a lightweight config service, cutting **102K auth calls/day**.*Platform & Performance*
 - Drove **208x query speed up** (9.6s to 46ms) on a 524M-row analytics table via zero-downtime schema migrations across 4 regions.
 - Cut dashboard load for **OpenAI** from **4 min to 3s** by indexing high-cardinality queries, directly unblocking a stalled enterprise deal.
 - Executed zero-downtime PK migrations on 3 tables of **1B+ rows** (1 TB, 2.9M rows/day) to prevent production outages.
 - Offloaded heavy aggregate queries from MySQL to ClickHouse, cutting database CPU from **96% to 30%** and enabling future growth.
 - Remediated SQL injection across 200+ APIs and shipped Static CI security scanning covering **98% of production traffic**.
 - Resolved **2 critical vulnerabilities** (RCE and SSRF bypass) and enabled TLS for database connections to harden production security.
- Zus (formerly Ochain)** Remote
Software Engineer - Backend, Blockchain Storage & Mobile (Contract) Feb 2022 – Mar 2025
 - First adopter of **MCP** to integrate a file-server MCP which directly communicates with AI agents to **read/write** files on chain.
 - Led development of 2 production Android apps, Bolt and Vult, driving 20% adoption growth and **\$2M+** in blockchain transactions.
 - Built a UAT automation suite for blockchain storage, cutting bugs by **90%** and release cycles from 2 weeks to 3 days.
 - Optimized S3-compatible storage handling **500M+ files** and 40TB+ across 50+ nodes at sub-100ms latency, 99.9% uptime.
 - Automated dynamic Sharder/Miner management and view-change protocols, boosting developer productivity by **90%**.
 - Enhanced multi-wallet concurrency via unified Go SDK, supporting **10K+ concurrent** transactions and 300% load-test gains.

OPEN SOURCE CONTRIBUTIONS

- Oppia Foundation (GSoC) [Merged PRs]** Mountain View, CA (Remote)
OSS Contributor & GSoC Jun 2021 – Jan 2022
 - Contributed to **Gradle to Bazel** migration, achieving **10x improvement** in build speeds.
 - Built **CI/CD pipelines** (GSoC) automating build triggers and deployment to **Google Drive**, **GCP**, and **Play Store** for **4+ tracks**.
 - Mentored and onboarded **3+ students** in the Android repository, guiding them to become active collaborators.
 - Developed modular **MVVM/MVP** architectures with **tablet support** for **30+ screen sizes**.
 - Authored **70+ Unit Tests** and **20+ E2E tests** using Espresso, Robolectric, and UIAutomator.
- GNOME Foundation [Nautilus]** Remote
OSS Contributor — C, GTK4 Jan 2021 – May 2021
 - Shipped a **title-bar button** in **Nautilus** to open the current path in another app in **one click**, replacing a manual multi-step flow.
 - Refactored core **UI components** in Nautilus, cutting render time by **30%** and smoothing navigation fluidity.
 - Integrated **drag-and-drop support**, collapsing a multi-step file-organization workflow into a single gesture.

ACHIEVEMENTS

- Selected for **Google Summer of Code 2022** (Oppia Foundation).
- Won **top prize** at the **CAMS Hackathon** for developing its Android app.
- Rated **Specialist** on Codeforces (max-rating **1509**) and **5-star** on CodeChef.
- Practised **700+** DSA problems on Leetcode.

TECHNICAL SKILLS

Languages: Java, Go, Ruby, Kotlin, Python, SQL, C, C++, Bash

Frameworks: Spring Boot, Rails, Node.js, REST/GraphQL, Microservices

DevOps & Tools: CI/CD, Prometheus, Grafana, Loki, SAST

AI Tools: Claude Code, Cursor, Claude Co-Work, Compound Engineering, MCP tools.

Cloud & Infra: AWS, Docker, K8s, Kafka, Jenkins, Helix

Databases: ClickHouse, MySQL, PostgreSQL, Redis, M...

Testing: JUnit, Mockito, Espresso, Robolectric

EDUCATION

- Indian Institute of Information Technology, Lucknow** Lucknow
Bachelor of Information Technology; CGPA: 8.32 Apr 2020 – Apr 2024
