PROFESSIONAL SUMMARY

Software engineer with 4+ years building for scale, including 2 years architecting production Android apps (Kotlin, Java) on a decentralized storage platform handling \$2M+ in transactions. Strong system design and architecture background from shipping enterprise-grade backend platforms (RBAC, multi-region infra, CDC pipelines) at BrowserStack. Hands-on with Kotlin, MVVM, Data Binding, LiveData, Dagger/Hilt, Room, WorkManager, RxJava, Retrofit, Android Jetpack, unit/instrumentation testing, and automated CI/CD release pipelines to the Play Store.

PROFESSIONAL EXPERIENCE

Zus (formerly Ochain)

Cupertino, CA (Remote)

Android Engineer (Contract) — Kotlin, Java, MVVM, Dagger/Hilt, RxJava

Feb 2022 – Mar 2024

Architected 2 production Android apps, Bolt (crypto wallet) and Vult (decentralized storage), growing the Android user base by 20% and powering \$2M+ in on-chain transactions.

Migrated and refactored the codebase to a clean MVVM architecture with Data Binding and LiveData for reactive, lifecycle-aware UI state, and Dagger/Hilt dependency injection across all activities and fragments.

Built WorkManager-based background task pipelines in Vult for reliable file upload, download, and inventory management, surviving process death and network loss.

Migrated local storage from Realm to Room database, reducing app size by 12% and improving query efficiency.

Built a Split Key Android module bridging the app and blockchain, enabling secure double-signing of transactions over Bluetooth.

Designed and implemented automated CI/CD release pipelines for alpha/beta/prod tracks, cutting manual release effort and accelerating release cycles by 70%.

Led and mentored two junior Android developers, running scrum ceremonies and code reviews, improving code quality by 40% and on-time delivery to 95%.

BrowserStack

Mumbai

Software Engineer - Backend, Platform Team

Apr 2025 – July 2026

Designed and shipped an RBAC system (roles, hierarchies, 14 check-points), enabling org-wide permissions for 50k+ customers — direct experience with framework and permissions architecture built from scratch.

Delivered multi-language SDK support across 5B+ API calls via client-aware routing, shipping secure, automated solutions at scale.

Drove 208x query speed up (9.6s to 46ms) on a 524M-row analytics table via zero-downtime schema migrations across 4 regions — strong systems and architecture experience applicable to mobile-scale platforms.

Remediated SQL injection across 200+ APIs and shipped Static CI security scanning covering 98% of production traffic, prioritizing security in every release.

ANDROID OPEN SOURCE CONTRIBUTIONS

Oppia Foundation (GSoC) [Merged PRs]

Mountain View, CA (Remote)

OSS Contributor & GSoC — Kotlin, Gradle, Bazel, AndroidSDK

Jun 2021 – Jan 2022

Developed modular MVVM/MVP architectures for activities and fragments, with tablet support across 30+ screen sizes.

Authored 70+ Unit Tests and 20+ instrumentation/E2E tests using Espresso, Robolectric, and UIAutomator, with JUnit as the test runner.

Contributed to the Gradle to Bazel build system migration, achieving a 10x improvement in build speeds.

Built CI/CD release pipelines (GSoC) automating signed build triggers and deployment to Google Play Store, GCP Bucket, and Google Drive for 4+ release tracks.

Mentored and onboarded 3+ students in the Android repository, guiding them to become active collaborators.

BSHAPP [Link]

Andhra Pradesh

Android Freelance Developer — Kotlin, Retrofit, OkHttp

May 2021 – Jun 2021

Implemented Jetpack Navigation with a single-activity, multi-fragment architecture, improving app performance by 25%.

Integrated REST APIs with Retrofit and optimized network caching with OkHttp, cutting data retrieval time by 20%.

Refactored to Kotlin Coroutines for async processing, improving app responsiveness by 40%, and added multi-language support expanding the user base by 30%.

ACHIEVEMENTS

Selected for Google Summer of Code 2022 (Oppia Foundation, Android track).

Won top prize at the CAMS Hackathon for developing its Android app.

Rated Specialist on Codeforces (max-rating 1509) and 5-star on CodeChef.

Practised 700+ DSA problems on Leetcode.

ANDROID PROJECTS

MusicPlayerApp (Jetpack Compose) · RefactorAndroidApp (MVVM refactor) · Festify · WhatsApp Clone · Video-Chatting · Wake-Lock · Nations-App · Call-Recorder

TECHNICAL SKILLS

Languages: Kotlin, Java, Go, Python, SQL, C, C++, Bash

Android Tools: Room, WorkManager, Jetpack Navigation, RxJava

Android Networking: Retrofit, OkHttp, Gradle, Bazel

DevOps: CI/CD, Docker, K8s, GitHub Actions, Play Store

Android: MVVM, MVP, Data Binding, LiveData, Dagger/Hilt

Testing: JUnit, Espresso, Robolectric, UIAutomator, Mockito

Backend & Cloud: Spring Boot, REST/GraphQL, AWS, GCP

Concepts: System Design, Distributed Systems, Concurrency

EDUCATION

Indian Institute of Information Technology, Lucknow

Lucknow

Bachelor of Information Technology; CGPA: 8.32

Apr 2020 – Apr 2024
