EXPERIENCE

- BrowserStack**

Mumbai
- *Backend SDE - Ruby on Rails, Java/Spring Boot, Node.js, ClickHouse, Kafka, AWS* Apr 2025 – Present
 - Launched a new **AWS region (Australia)** for the testing platform, now serving **360K requests/hour** in production.
 - Cut dashboard load time from **3–4 min → 3 s** via indexed queries, unblocking a stalled enterprise deal.
 - Built the **access-control system** from the ground up — **RBAC** with **multi-team** support across **~14 enforcement points**.
 - Root-caused a stale role mapping that hid **756 builds** from customer dashboards; shipped the data and access-check fix.
 - Drove a **208× query speedup** (9.6 s → 46 ms) on a **524M-row** table via a **zero-downtime** schema migration across **4 regions**.
 - Averted an outage via **zero-downtime** primary-key migrations on **3 tables of 1B+ rows** (~1TB) growing **2.9M rows/day**.
 - Shipped input validation on high-traffic APIs (**100M+ calls**), adding **multi-language support** across web and SDK clients.
 - Built **test-run aggregation** combining a run and its re-runs into accurate consolidated duration, status, and ordering.
 - Cut **database CPU from 96%** to stable by offloading heavy aggregate queries to a columnar store (**ClickHouse**).
 - Remediated **SQL injection** across **50+ APIs** and rolled out **CI security scanning** covering **~98% of traffic**.
